## Uponor Launches New Stainless-steel Manifold for Radiant Heating and Cooling Applications

Uponor North America ([Uponor](#)) is launching a new Stainless-steel Manifold targeted for residential and commercial radiant heating and cooling applications.

Made of corrosion-resistant stainless steel, the manifold is available in 1" and 1¼" sizes in 2 through 8, 10 and 12 loop configurations. It features integrated flow meters for easy system balancing, full-port ball valves with temperature gauges, and balancing and isolation valves for complete loop isolation.

**The new Stainless-steel Manifold from Uponor is available in 1" and 1¼" sizes and offers 2 through 8, 10 and 12 loop configurations for residential and commercial radiant heating and cooling applications.**

Pre-assembled right out of the box, the manifold provides contractors with faster installs and also offers greater material cost savings.

“Adding the Stainless-steel Manifold to our radiant manifold offering allows us to provide our customers with a cost-effective, pre-assembled metal alternative,” says [Casey Swanson](#), sr. manager, Commercial Segment at Uponor. “Now professionals can choose from our comprehensive offering of stainless-steel, engineered polymer (EP) or TruFLOW™ brass manifolds to meet any radiant application need.”

**Uponor, Inc.** is an award-winning provider of plumbing, fire safety, radiant heating/cooling, hydronic distribution piping and pre-insulated piping systems for residential and commercial applications. In 2014, the company received the Community Impact Award for Sustainability and the Progress Minnesota award for driving business growth and economic development. The company was also named a Top 100 Workplace by the Minneapolis Star Tribune. Uponor, Inc. employs more than 500 people at its North American headquarters in Apple Valley, Minn.
