Uponor Enhances Engineering Resources Website

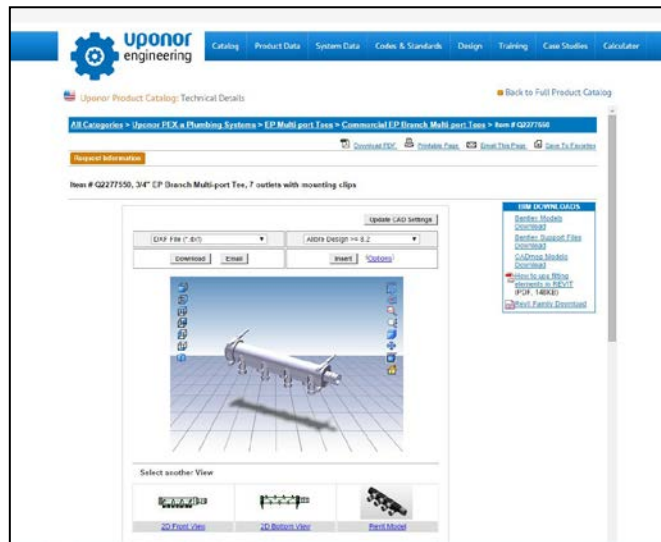

Uponor North America (Uponor) recently updated its engineering website, Uponorengineering.com, to offer even more resources for professionals specifying and designing PEX plumbing, radiant heating/cooling, hydronic distribution piping and pre-insulated piping systems.

In addition to the website's previous features, which included BIM (building information modeling) product data, specifications, submittals and an online product catalog, the updated site offers an extensive library of CAD (computer-aided design) details as well as a pipe-sizing calculator. Additionally, the new site offers a summary of all codes and standards and links to public listings for Uponor products as well as submittal packages for each system that can easily be downloaded with one simple click.

The newly revised Uponorengineering.com website now offers even more resources for the engineering professional, including BIM product data, CAD details, specifications, submittals and a pipe sizing calculator.

“With the growth we are continuing to see in commercial systems using our PEX plumbing, heating and cooling products, we want to provide our partners with the fastest, most user-friendly resources available to ensure they can specify and design quickly and easily with Uponor,” says [Don Costello](#), product manager, Web, at Uponor.

Uponorengineering.com now offers an extensive library of CAD details in addition to BIM product data.

Uponor, Inc. is an award-winning provider of plumbing, fire safety, radiant heating/cooling, hydronic distribution piping and pre-insulated piping systems for residential and commercial applications. In 2014, the company received the Community Impact Award for Sustainability and the Progress Minnesota award for driving business growth and economic development. The company was also named a Top 100 Workplace by the Minneapolis Star Tribune. Uponor, Inc. employs more than 500 people at its North American headquarters in Apple Valley, Minn.
